Solar Power, Inc. is a leading manufacturer, supplier and installer of photovoltaic solar power solutions that deliver reliable and efficient alternative means of electricity. SPI provides its own unique brand of turnkey solar power solutions to residential, commercial and public sector customers across the U.S.

DESCRIPTION:

- All phases of working under the construction superintendent to learn installation of the photovoltaic panels; inspecting and ensuring all mounting and installation of panels are properly done and safe for use and electrical hook-up.
- Learning the mechanics and trade of Solar Power Installation; while assisting other crew members in all aspects of preparation, set-up, installation, and clean-up of each job.

QUALIFICATIONS:

- 2-5 years experience in residential construction work in the area of roofing, remodeling, and general construction work.
- Experience working with control circuits and power distribution for residential homes.
- Ability to read blue prints is a plus.
- Mechanical equipment installation experience, as well as mechanical aptitude is most preferred.
- Must have high school diploma or GED, stable work history and clean DMV record.

- Must practice safe work habits; be reliable, dependable and timely.
- Must be able to pass a drug screening.
- Ability to work under stress and communicate effectively with co-workers and supervisors is key to this position.
- Must be able to travel for 3-5 days at a time.
